

Lotus Notes Integration

Integrating Lotus Notes with other business applications and web services

Lotus Notes Server Integration

TaskCentre enables companies to integrate Lotus Notes with other applications, automate business processes and create cross-application workflows through a simple, code free drag and drop interface. Are you ready to add a new dimension to Lotus Notes?

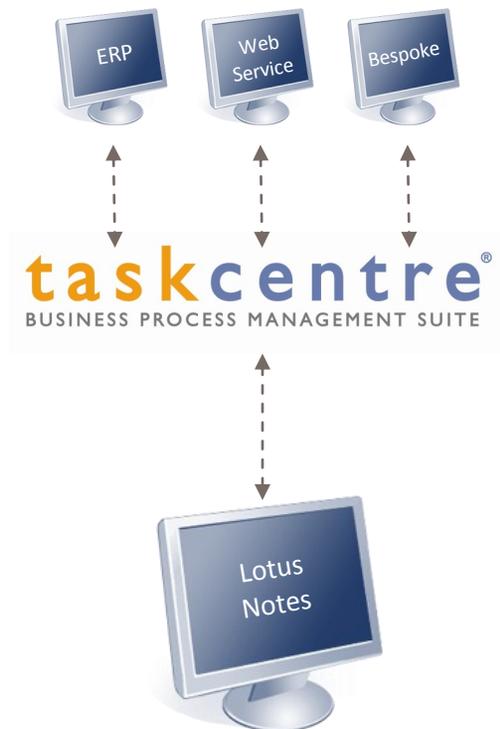

Orbis Software and its global partner community have collaborated to deliver the drag and drop functionality you need to quickly and simply integrate Lotus Notes server with your other business applications.

The Problem:

Lotus Notes Server is a powerful solution for developing feature rich applications yet it lacks the ability to quickly and simply integrate with other cloud or on-premise business applications.

The Solution:

TaskCentre can quickly and simply integrate Lotus Notes through its drag and drop integration, workflow and process automation capabilities to improve business performance.

Integrate Lotus Notes with other applications

A common challenge for companies running Lotus Notes is it's lack of integration with other on premise or other cloud-based applications. It deprives Lotus Notes users of critical information and causes a significant amount of repetitive, bi-directional data entry.

TaskCentre is a market proven solution that can integrate applications built on Lotus Notes with other business solutions to deliver perfect data visibility and remove repetitive data entry.

Workflow that starts or ends outside of Lotus

Lotus Notes is a powerful collaboration software platform that provides users with full visibility of their workflow processes. Yet, if a workflow process starts or ends outside of a Lotus Notes Domino application users are not automatically included in the management or contribution process.

TaskCentre and its multi system, bi-directional workflow capabilities enable organisations using Lotus Notes to quickly create workflows that start or end outside of Lotus Notes. This ensures users have the ability to contribute to decisions regardless of where a workflow begins or ends.

Automating processes across multiple systems

Repetitive administration such as data entry, creating and sending reports and monitoring business KPI's or compliance procedures all impact on the ability of Lotus Notes users to achieve their objectives.

TaskCentre can automate repetitive Lotus Notes processes that are unique to your business. Furthermore, it can extend any process automation across multiple business systems and departments.
